

Advanced Cypher Queries and Graph Pattern Matching

Student Name:	Student Name	Student ID / Roll:	EXP-001
Experiment Date:	2026-09-15	Quiz Evaluation:	0 / 10 (0%)

1. Learning Objectives

- Understand Cypher query language syntax for nodes, relationships, and properties.
- Perform multi-hop graph traversals to discover indirect connections.
- Apply filtering (WHERE), aggregation (COUNT, COLLECT), and ordering on graph data.
- Execute complex graph pattern matching queries with variable-length paths.
- Efficiently retrieve complex relationships and hidden connections in a knowledge graph.

2. Recorded Query Trials & Results

No query trials recorded during this session.

3. Observations & Analysis

The Cypher query experiments demonstrated effective graph pattern matching across varying traversal depths and aggregation operations, confirming the efficiency of graph-based retrieval.
